

# ALTIUM BASIC TRAINING

**Altium**<sup>®</sup>

## THE RIGHT CHOICE

### Get the Most out of Altium Designer and Altium 365

The Altium Basic Training course **provides a clear and defined path to mastering the key design steps** within the design environment. A structured curriculum ensures that each attendee learns the essential skills needed to navigate Altium Designer proficiently, covering schematic design, PCB layout, simulation, 3D visualization, library management and manufacturing outputs. With a clearly defined outcome, duration and associated cost, training provides a reliable framework for skills development.

In contrast to structured training, **self-study in Altium Designer presents challenges.**

The lack of a structured curriculum means that there is no guarantee of covering all essential aspects. Self-study lacks the clear timeline that training provides, leaving learners uncertain as to when they will achieve proficiency. In addition, the opportunity cost of self-study can escalate quickly, as valuable time spent on trial and error can lead to delays and setbacks.

By choosing formal training, users mitigate these risks and **ensure a comprehensive understanding of Altium Designer within a defined timeframe.** Investing in training not only ensures that all essential elements are covered, but also minimizes the opportunity costs associated with extended self-study. Participants leave the course with the **confidence and skills needed to efficiently design electronic circuits and PCBs**, making the investment in formal training a strategic and cost-effective choice for users who want to excel in Altium Designer.
