LIBRARY SETUP

A structured and well-defined component library is crucial for successful design team collaboration. Using properly structured component libraries from the start saves you valuable time. In addition, by providing standard, ready-to-use symbols with the library, we can customize the components to best suit your needs. Based on your requirements, we set up your component library, create the processes, and write manuals on how to create new components in a consistent manner. Proper configuration saves a lot of time and is a critical step in aligning people, processes, and software.

Our Library Setup Service covers the following topics:

- Selection of component library type with best fit to the team
- Definition of library structure
- Definition of roles for library management in the team
- Definition of required component parameters which will be stored in the library to support all required data outputs
- Definition of processes and design guide for component data
- Import of existing component libraries and their processing to new structure
- Documentation of component creation process
- Documentation of component modification process with all consequences on existing projects
