# ONBOARDING

Based on your requirements and business processes, we work with your team to set up the software environment so you can get started on your design projects in the most efficient way. The onboarding process begins with an assessment of your specific needs and workflows. The assessment forms the basis for setting up the Altium Designer environment, selecting and configuring the most appropriate component library and project management structure. Our onboarding service guarantees a defined outcome of the setup process, a defined time-frame and a defined cost, ensuring that people, processes and Altium Designer are aligned. This alignment is the foundation for you to be efficient and meet your time-to-market goals for your products and solutions.

## Our Onboarding Service covers the following topics:

- Analysis of your processes, team structure, and workflows
- Installation of Altium designer, license assignment and user role setup
- Setup of the core parameters of Altium Designer such as shortcuts, document templates, design rules, etc.
- Selection and setup of the component library style including the definition of required component parameters, library structure, etc.
- Selection and setup of project management parameters including storage locations, revisioning and versioning
